

SWEDISH EMBEDDED AWARD 2020

50 000

Swedish kronor for students best embedded electronic design

Both enterprises and students are invited to The Swedish Embedded Award. This years' hottest embedded design from students at Swedish Universities, will be awarded a scholarship of 50 000 SEK. It could be yours!

Winning or not, to be nominated is good for your CV and gives you a great opportunity to expand your professional network. You are welcome to take part in this Award for 2020. You can read more about the Award rules and also apply at:

www.swedishembeddedaward.se

You can apply with your project today, but not later than **September 11, 2020**.

Winners 2019 in the STUDENT, ENTERPRISE and IoT Category:

STUDENT Category

Thibault Helle, Marek Baczynski and Ramtin Massoumzadeh from KTH won with "CubicMeter", a smart, non-invasive water flow meter based on ultrasound technology to be attached to a water pipe. Since the meter is non-invasive anyone is allowed to install it with no risk of water leakage.

ENTERPRISE Category

Vectorized Move AB won with "Walkbeat", a system that uses motion sensors and a mobile app to monitor the movement patterns of a person or an animal. This can for instance be used to remotely diagnose Parkinson's disease in humans or lameness in horses.

IoT Category

Brinja AB won with "Brinja Core" and "Brinja Sensor Node", a connected emergency system for early work site evacuation. The system can be triggered from many different sources and is able to shorten the evacuation time in a big site from the common 30-60 minutes down to only a few minutes.

Nominated entries and winners will exhibit at the largest embedded conference in Europe, Embedded Conference Scandinavia 4-5 November 2020, in Stockholm-Kista.

ORGANIZERS:

The Swedish Electronics Trade Association, Svensk Elektronik, with their section Embedded Technology, the exhibition organizer, Bra Mässor and the leading Scandinavian electronic design online magazine Elektronik i Norden.
